

## NEW MEXICO ENVIRONMENT DEPARTMENT

## Ground Water Quality Bureau

1190 St. Francis Drive, P. O. Box 5469 Santa Fe, NM 87502-5469 Phone (505) 827-2900 Fax (505) 827-2965 www.nmenv.state.nm.us

RON CURRY Secretary JON GOLDSTEIN Deputy Secretary

## Memorandum

To: LaDonna Turner, Site Assessment Manager

**Technical and Enforcement Branch** 

U.S. Environmental Protection Agency, Region 6

From: Dana Bahar, Manager, Superfund Oversight Section

**Ground Water Quality Bureau, New Mexico Environment** 

Department.

Date: September 10, 2009

**Subject: Pre-CERCLIS Screening Assessment of Faith Mine, McKinley** 

County, New Mexico: Further action under CERCLA

recommended

**Site name** Faith Mine

City not applicable State New Mexico Zip code not applicable

**County** McKinley

**Latitude** 35° 19' 41.30" **Longitude** 107° 48' 50.46"

**Site physical description:** The Faith Mine currently has scattered waste material piles, some of which are located along an arroyo. The remains of a possible load-out structure also are located along the arroyo. A possible archaeological site, distinguished by the presence of pottery shards, is located near a concrete pad adjacent to double power poles, which may have been a transformer pad. Numerous roads cross the site, many of which show evidence of erosion.

**Site identification:** Potential alluvial ground water contamination within the Grants Mineral Belt was identified because background standards established for the contaminants of concern for ongoing remedial action associated with the Homestake Mining Company NPL site (CERCLIS NMD0007860935) are generally higher than Maximum Contaminant Levels (MCLs). NMED conducted sampling of private residential wells in subdivisions located in the vicinity of the HMC site, and found that the majority had one or more contaminant concentrations exceeding MCLs.

**Site summary:** Observations made during NMED's Site reconnaissance are shown on the accompanying figures. The waste piles examined had elevated radioactivity (highest

Ms. LaDonna Turner, EPA Region 6 Site Assessment Manager Pre-CERCLIS Screening Assessment of Faith Mine, McKinley County, New Mexico September 10, 2009

reading=578 counts per second (cps); background=15 cps). Contamination might be dispersed by precipitative erosion and wind, and may enter the bedrock ground water system through alluvial interconnections.

**Targets:** Residences are located near the junction of State Hwy. 605 and 509, approximately 1.73 air-miles east-northeast of the Site. Other potential targets may include cattle and wildlife.

Closest well sampled to date: livestock well SMC-33 (0.48 air-miles; 164 µg/l total uranium in 2009 sampling [total uranium Maximum Contaminant Level=30 µg/l]).

**Site ownership and Potentially Responsible Parties:** Surface rights reportedly are held by Schmitt; mineral rights are held by Newmont Mining Company. M&M Mining Company reportedly last operated the mine in 1981.

**File review:** NMED staff reviewed the following files:

- Database compiled by Mining and Minerals Division of the New Mexico Energy, Minerals, and Natural Resources Department (07/20/2007).
- Anderson, Orin J., 1980. "Abandoned or inactive uranium mines in New Mexico".
- McLemore, Virginia T. and William L. Chenoweth, 1991. "Uranium mines and deposits in the Grants district, Cibola and McKinley Counties, New Mexico." New Mexico Bureau of Mines and Mineral Resources Open-file report 353.
- Rappaport, Linda, "Uranium deposits of the Poison Canyon ore trend, Grants District," in "Geology and technology of the Grants Uranium Region, 1963. State Bureau of Mines and Mineral Resources.
- U.S. Geological Survey, 1997. "Gallup quadrangle NURE HSSR study." OFR-97-492.

**Site reconnaissance:** NMED staff conducted a Site reconnaissance on July 2, 2009 **Recommendation:** A release of CERCLA hazardous substances has been documented at the site. NMED recommends further investigation under CERCLA to assess the risk posed by the site using the Hazard Ranking System.

NMED recommends that the investigation include the following:

- 1. Sample sediments along drainages to characterize extent of Site-derived waste dispersion.
- 2. Investigate and characterize ground water impacts.

In addition NMED recommends the following actions be performed to address immediate threats to public health and the environment:

1. Remove waste with elevated radioactivity.
